## SUBJECT INDEX

- Accuracy of finite element solutions of problems with traction boundary conditions, 103
- Analysis of static and dynamic structures in economic models: methodological and practical aspects, 84
- Analysis on free convection flow from a vertical plate with generalized wall temperature distribution, 122
- Application of group representation theory to symmetric structures, 290
- Application of similarity to research of new boundary integral equations for plate flexure problems, 66
- Aspects of mathematical modelling related to optimization, 71
- Binding of a circular plate on a linear visco-elastic foundation, 60
- Boundary conditions, on the accuracy of finite element solutions of problems with traction, 103
- Boundary element analysis, on the implementation of elasto-plastic, 39
- Boundary element method in plasticity, 275
- Boundary elements for heat conduction in composite media, 45
- Boundary elements in 2D plasticity using quadratic shape functions, 371
- Boundary elements: new developments in elastoplastic analysis, 376
- Boundary value problem of heat conduction with nonlinear material and nonlinear boundary conditions, 417
- Boundary-volume element discretization of inhomogeneous elastodynamic problems, 194
- Burgers' equation, a finite element approach to, 189
- Cement kiln, factorial analysis of a, 341
- Comparison between different spectrum compatible earthquake simulation methods, 348
- Computations, cyclic matrices applied to unsteady flow, 295
- Contribution to the mathematical analysis of variable spindle speed machining, 158
- Conversion problems of discrete-continuous models, 414
- Cyclic matrices applied to unsteady flow computations, 295
- Derivation of stiffness matrices from integral equations, 355
- Dynamic processes of morphogenesis modelled as a game of collective behaviour between automata, 300
- Earthquake simulation methods, a comparison between different spectrum compatible, 348
- Economic models: methodological and practical aspects, analysis of static and dynamic structures in, 84
- Effects of the urban environment on the trajectories of stack plumes, 151
- Elasticity, a mixed finite element family in plane, 259
- Elastodynamic problems, on boundary-volume element discretization of inhomogeneous, 194
- Elastoplastic analysis, boundary elements: new developments in, 376
- Energy methods, a unified formulation of the finite and boundary element methods, using 263
- Epizootic in the Kruger National Park, a mathematical model of an anthrax, 130
- Equivalence criteria among man and animals in experimental investigations of high voltage power frequency exposure hazards, 92
- Evaluation of the handling capacity of multi-car lift systems, 49
- Exact bounds on average granular pressures in a general bin model, 185
- Exposure hazards, equivalence criteria among man and animals in experimental investigations of high voltage frequency, 92
- Extensions of the image approximations of a conducting earth, 287
- Factorial analysis of a cement kiln, 341
- Factor substitutability: another view, 218
- Fan performance, numerical modelling of, 246
- Finite and boundary element methods, using energy methods, a unified formulation of the, 263
- Finite approximations for the numerical solution of differential equations, software for a method of, 282
- Finite element approach to Burgers' equation, 189
- Finite element model of pollution in the Clyde estuary: formulation, validation and utilization, 137
- Finite element solutions of problems with traction boundary conditions, on the accuracy of, 103
- Fluid loading, resonance-sensitivity in dynamic Hopf bifurcations under, 143
- Football plays, a simulation model for American, 13
- Four concepts of probability, 306
- Gas bubbles in liquids, prediction of initial motion of a, 24
- Gas flow with dispersed particles, a mathematical model for two-dimensional molecular, 205
- Goal programming: a new tool for optimization in petroleum history matching, 223
- Handling capacity of multi-car lift systems, evaluation of the, 49
- Harbour, numerical response of an arbitrarily shaped, 109
- Heat conduction in composite media, boundary elements for, 45

- Heat transfer process in a shell and tube condenser for use in refrigeration applications, a mathematical model of the, 29
- Hopf bifurcations under fluid loading, resonance-sensitivity in dynamic, 143
- Hybrid numerical methods for periodic initial value problems involving second-order differential equations, 53
- Implementation of elasto-plastic boundary element analysis, 39
- Image approximations of a conducting earth, extensions of the, 287
- Interfacing finite element and boundary element discretizations, 383
- Improved computational method for sensitivity analysis: the Green's function method with AIM, 432
- Integral equation method to solve three-dimensional confined flow to drainage systems, 399
- Lakes, long term simulation of stratification in cooling, 313
- Lift systems, evaluation of the handling capacity of multi-car, 49
- Load deflection curves of radial tyres, 442
- Long term simulation of stratification in cooling lakes, 313
- Machining parameter optimization, sensitivity analysis in, 97
- Mathematical model for two-dimensional molecular gas flow with dispersed particles, 205
- Mathematical modelling and optimization for integrated reliability systems, 366
- Mathematical model of an anthrax epizootic in the Kruger National Park, 130
- Mathematical model of the heat transfer process in a shell and tube condenser for use in refrigeration applications, 29
- Maximum likelihood estimation for a road traffic network model, 34
- Measurement and comparison of soil structures, 2
- Mixed finite element family in plane elasticity, 259
- Model for population extinction, 227
- Modelling and forecasting of vector stochastic processes, 199
- Modelling and prediction of stochastic processes involving periodicity, 241
- Modelling and production control of a system for utilization and waste water treatment of sulphite spent liquor, 251
- Model-switching criterion for a class of stochastic linear programs, 336
- Motion of a gas bubble in liquids, prediction of initial, 24
- Multi-level optimization for multi-objective problems, 173
- Multi-phase flow through a porous medium and its application to reservoir engineering, the numerical simulation of, 165
- Network systems, operational readiness and survivability of, 89
- Numerical integration formulae over triangles and squares with a  $1/R$  singularity, 209
- Numerical modelling of fan performance, 246
- Numerical simulation of multi-phase flow through a porous medium and its application to reservoir engineering, 165
- Numerical study of water waves on sloping beaches, 321
- Numerical response of an arbitrarily shaped harbour, 109
- Operational readiness and survivability of network systems, 89
- Optimal segmentation of graphs with exclusive-OR nodes, 231
- Optimization, aspects of mathematical modelling related to, 71
- Optimization for multi-objective problems, multi-level, 173
- Optimization in petroleum history matching, goal programming: a new tool for, 223
- Optimization, sensitivity analysis in machining parameter, 97
- Plasticity, the boundary element methods in, 275
- Plate flexure problems, application of similarity to research of new boundary integral equations for, 66
- Plumes, effects of the urban environment on the trajectories of stack, 151
- Pollution in the Clyde estuary: formulation, validation and utilization, a finite element model of, 137
- Population extinction, a model for, 227
- Prediction of initial motion of a gas bubble in liquids, 24
- Probabilities, two-point estimates in, 329
- Quadratic shape functions, boundary elements in 2D plasticity using, 371
- Radach method to compute eigen oscillations of semi-closed water basins: an application to the Ligurian Sea, 387
- Recirculating flow in an opposed jet flame holder, 179
- Refrigeration applications, a mathematical model of the heat transfer process in a shell and tube condenser for use in, 29
- Reliability systems, mathematical modelling and optimization for integrated, 366
- Reservoir engineering, the numerical simulation of multi-phase flow through a porous medium and its application to, 165
- Resonance-sensitivity in dynamic Hopf bifurcations under fluid loading, 143
- Semi-Markov processes in modelling and reliability: a new approach, 269
- Sensitivity analysis from the state equations by perturbation techniques, 405
- Sensitivity analysis in machining parameter optimization, 97
- Simulation model for American football plays, 13
- Simulation of the influence of different maximum class sizes on average class size in elementary schools, 389
- Software for a method of finite approximations for the numerical solution of differential equations, 282
- Soil structures, measurement and comparison of, 2
- Solution of parabolic differential equations: 447
- Spindle speed machining, a contribution to the mathematical analysis of variable, 158
- Stochastic linear programs, a model-switching criterion for a class of, 336
- Stochastic processes, on modelling and forecasting of vector, 199
- Stochastic processes involving periodicity, modelling and prediction of, 241
- Stratification in cooling lakes, long term simulation of, 313
- Structures, application of group representation theory to symmetric structures, 290
- Structures, theoretical basis of boundary solutions for the linear theory of, 57
- Sulphite, spent liquor modelling and production control of a system for utilization and waste water treatment of, 251
- Theoretical basis of boundary solutions for the linear theory of structures, 57
- Traffic network model, maximum likelihood estimation for a road, 34
- Tridimensional plasticity using BIEM, 442
- Two methods for computing the capacitance of a quadrilateral, 428
- Two-point estimates in probabilities, 329
- Unified formulation of the finite and boundary element methods, using energy methods, 263
- Urban environment on the trajectories of stack plumes, effects of the, 151
- Water waves diffraction around cylindrical obstacles, 237
- Waves on sloping beaches, a numerical study of water, 321
